

PYTHON STARTUP ASSESSMENT

Hard Level

Student Name: _____	Index No.: _____
Duration: 60 Minutes	Total Marks: 100

Instructions

1. Answer all questions.
2. Show all workings where necessary.
3. Write Python code using correct syntax.
4. Follow Python naming rules.
5. Assume Python 3.x.

SECTION A – Multiple Choice (20 Marks)

1. Which of the following is a valid Python variable name?

- A. 2students B. student-name C. _student2 D. class

2. What is the output? `x='15' y=5 print(int(x)+y)`

- A. '155' B. 20 C. Error D. '20'

3. Which function converts a floating-point number to an integer?

- A. float() B. string() C. int() D. number()

4. Output of `print('Python','Programming',sep='-')`

- A. Python Programming B. Python-Programming C. PythonProgramming D. Error

5. Which statement about comments is TRUE?

- A. Executed B. Improve speed C. Help explain code D. Variables

6. Datatype of `x = 10`

- A. float B. int C. string D. bool

7. Output of `print(type(float(8)))`

- A. int B. str C. float D. number

8. Which creates a string?

- A. `x=25` B. `x='25'` C. `x=True` D. `x=25.0`

9. Correct string concatenation operator?

- A. - B. + C. * D. /

10. Best variable name?

- A. Student Name B. studentName C. student_name D. student-name

SECTION B – Predict the Output (30 Marks)

11.

```
name='Sam'  
age=22  
print(name+' is '+str(age)+' years old.')
```

Answer: _____

12.

```
x='20'  
y=10  
print(int(x)*y)
```

Answer: _____

13.

```
a=8  
b=3  
print(float(a)/b)
```

Answer: _____

14.

```
x=9.99  
print(int(x))  
print(type(int(x)))
```

Answer: _____

15.

```
# Python Test  
name='Ada'  
print('Welcome, ',name)
```

Answer: _____

16.

```
first='Cyber'  
second='Security'  
print(first+' '+second)
```

Answer: _____

SECTION C – Error Identification and Correction (20 Marks)

17.

```
2name='John'  
print(2name)
```

Correct Code: _____

18.

```
print("Python')
```

Correct Code: _____

19.

```
age='20'  
print(age+5)
```

Correct Code: _____

20.

```
student-name='Paul'  
print(student-name)
```

Correct Code: _____

SECTION D – Programming (30 Marks)

21. Create variables for student name, age, height and course, then print the information in one sentence.

22. Store first name and surname separately, concatenate into a full name, convert age (stored as a string) into an integer, then print both.

23. Write a program that uses at least three variables, one single-line comment, datatype casting, string concatenation and at least three print() statements.

BONUS QUESTION (10 Marks)

```
name='Python '  
year='2026'  
print(name+' '+year)  
print(int(year)+4)  
print(type(year))  
print(type(int(year)))
```

End of Examination – Best of Luck!
